

The Oxydive OX10™

**You will not
notice it.
They will not
notice you.**

During covert operations there are many things to focus on. Diving should not be one of them. To allow full concentration on the mission at hand, we made our new closed circuit oxygen rebreather, OX10, more compact, comfortable and ergonomic than ever before. Developed specifically for special operations, with features such as an automatic buoyancy adjustment, it's completely silent and perfect for tactical operations.
